<HTML Tags>

...

What are tags?

Tags are “code” for the computer to know what each part of your website is.

<html>

How do you write a tag?

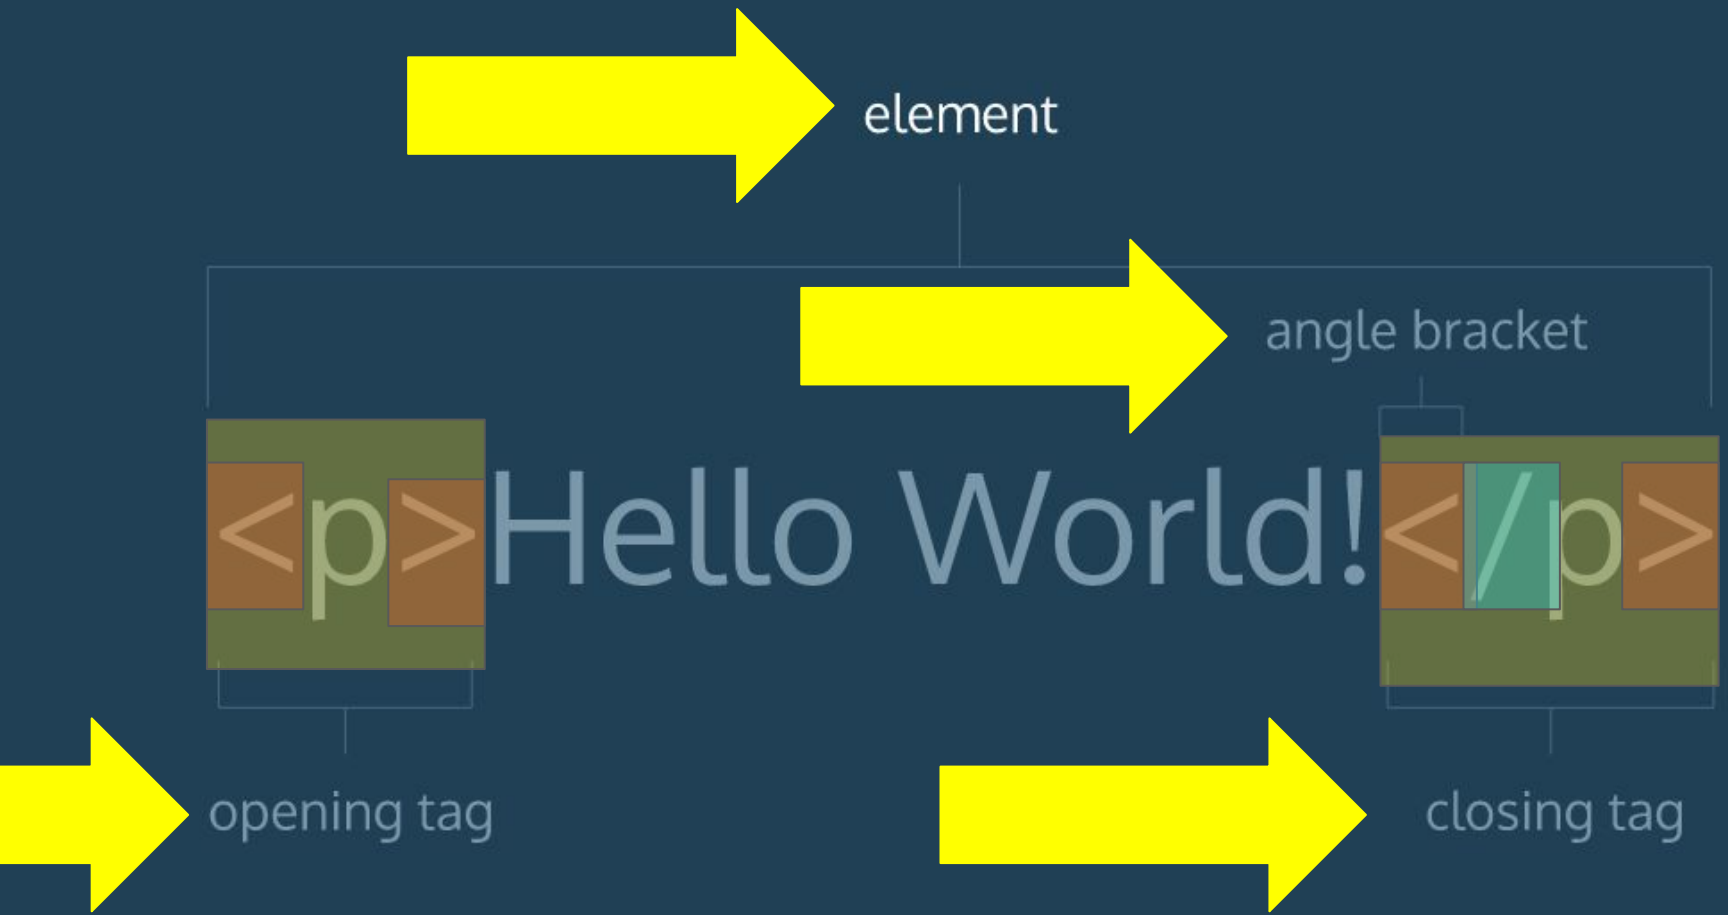
All tags are written inside special brackets: < and >

Those brackets tell the computer special directions

All Tags start with the tag inside the brackets: <h1>

Most tags also use an end tag </h1>

The slash mark tells the computer you are done writing your tag



element
angle bracket
Hello World!
opening tag
closing tag

What tags do I need to know?

1. <h1> </h1> Titles
2. <body> </body> All your website is in between these two
3.   A paragraph or chunk of text goes here
4.
  Creates a break, which is like hitting enter key
5. <img> </img> inserts an image into your website

Writing with tags

<body> (opens the body of your website)

<h1> Your Title Goes here </h1>

 Your poem or your information goes here

The br tags create line breaks which are enter keys

Then you use an end p tag to end your paragraph

</body> This ends your webpage and information on it
